Department of Artificial Intelligence and Data Science ASSIGNMENT

SUBJECT TITLE	Big Data Analytics		
SUBJECT TYPE	Integrated		
SUBJECT CODE	BAD601		
ACADEMIC YEAR	2025	BATCH	
SCHEME	2022		
SEMESTER	6th sem		
FACULTY NAME and DESIGNATION	Darshan A, Assistant Professor		

<i>Module -1</i>			
<i>Q. No.</i>	<i>Questions</i>	<i>Bloom's LL</i>	<i>COs</i>
1	Apply the concept of data classification to categorize the different types of data generated in a typical business environment.	L3	CO1
2	Demonstrate how Big Data analytics can be used to improve decision-making in organizations.	L3	CO1
3	Illustrate the key differences between a traditional data warehouse and a Hadoop environment with real-world examples.	L3	CO1
4	Use an example to show how NoSQL databases are better suited for handling Big Data compared to relational databases.	L3	CO1
5	Analyze the evolution of Big Data and identify key milestones that led to its growth.	L4	CO1
6	Examine the role of Hadoop in Big Data Analytics and evaluate how it handles large-scale data processing.	L4	CO1
7	Break down the classification of analytics and explain how each type supports decision-making in Big Data environments.	L4	CO1
8	Critically assess the technologies used in Big Data environments and recommend the most effective tool for real-time analytics.	L5	CO1
9	Evaluate the importance of Big Data Analytics in modern industries. Justify how it provides a competitive advantage.	L5	CO1

Module -2			
<i>Q. No.</i>	Questions	<i>Blooms LL</i>	<i>Cos</i>
1	Illustrate a real-world use case where Hadoop would be a better choice than RDBMS.	L3	CO2
2	Differentiate between the storage mechanisms of HDFS and traditional relational databases.	L4	CO2
3	Create a MapReduce program that filters and lists all transactions with a value greater than 10,000 from a large transaction dataset.	L3	CO2
4	Differentiate between the roles of Mapper and Reducer in a MapReduce program.	L4	CO2
