input.txt

```
1 1) delete the contents of datanode:
2     rm -r /usr/local/hadoop/hdfs/datanode/*
3 2) stop-dfs.sh
4 3) $HADOOP_HOME/sbin/start-dfs.sh
5 4) jps
6 5) start-yarn.sh
7 6) jps
8 ---- list of jps, secondaryNameNode, NameNode, DataNode, NodeManager, ResourceManager will be displayed
9 7) hadoop fs -mkdir /input_matrix
10 8) hdfs dfs -put /home/thejaschandra/input.txt /input_matrix
11 9) hdfs dfs -cat /input_matrix/input.txt
12 10) hadoop jar /home/thejaschandra/mat.jar com.mapreduce.matrix.MatrixMultiplication /input_matrix/input.txt /output_matrix
13 11) in hdfs-site.xml, modify this
14     "<property>
15 <name>dfs.replication</name>
16 <value>1</value>
17 </property>
18 <property>
19 <name>dfs.namenode.name.dir</name>
20 <value>file:///usr/local/hadoop/hdfs/namenode</value>
21 </property>
22 <property>
23 <name>dfs.data.dir</name>
24 <value>file:///usr/local/hadoop/hdfs/datanode</value>
25 </property>"
```

```
27 12) add this to mapred-site.xml
28     "<property>
29 <name>mapreduce.framework.name</name>
30 <value>yarn</value>
31 </property>
32 <property>
33   <name>yarn.app.mapreduce.am.env</name>
34   <value>HADOOP_MAPRED_HOME=${HADOOP_HOME}</value>
35 </property>
36
37 <property>
38   <name>mapreduce.map.env</name>
39   <value>HADOOP_MAPRED_HOME=${HADOOP_HOME}</value>
40 </property>
41
42 <property>
43   <name>mapreduce.reduce.env</name>
44   <value>HADOOP_MAPRED_HOME=${HADOOP_HOME}</value>
45 </property>"
46
```
